**DEPARTMENT OF MECHANICAL AND INDUSTRIAL ENGINEERING  
MECHANICAL ENGINEERING PROGRAM, BSC.**

1. Understand the basic concepts of CAD/CAM including the principles and practice of computer aided solid modelling and its applications to manufacturing.
2. Be familiar with the application of the CAD CAM in many fields: Sheetmetal design and manufacturing, additive manufacturing, and CNC machine.
3. Practice Mold design basics and using the CAD CAM to design and manufacturing plastic injection molds.
4. Understand the finite element basic principles, and its applications and advantages.

**b. The following student outcomes are addressed by the course:**

SO-(2) An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.

SO-(4) An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environmental, and societal context.

SO-(pc) The structure of the curriculum must provide both breadth and depth across the range of engineering topics implied by the title of the program.
