Specialized Free Dental Medical Day Organized Through the Collaboration Between Applied Science Private University and the Al-Birr and Al-Ihsan Campaign of the Jordanian Hashemite Fund for Human Development (JOHUD) at SOS Children's Villages Jordan – Amman Village

As part of Applied Science Private University's commitment to serving the community and strengthening its social responsibility, the University, represented by the Faculty of Dentistry, organized a specialized free dental medical day in partnership with the Al-Birr and Al-Ihsan Campaign under the "Healing Touch" Program, at SOS Children's Villages Jordan – Amman Village, benefiting 50 children.

The initiative was launched to strengthen cooperation between academic, national, and community institutions, support access to healthcare services for underserved groups, enhance preventive and early detection programs for oral and dental health conditions, and raise awareness about the importance of daily oral hygiene and regular dental check-ups.

The medical day included educational sessions on oral and dental health and proper oral hygiene practices, in addition to dental examinations and initial screenings conducted through the mobile dental clinic operated by the Al-Birr and Al-Ihsan Campaign and the Jordanian Hashemite Fund for Human Development (JOHUD). The event was carried out with the participation of 17 students from the Faculty of Dentistry at Applied Science Private University, four faculty dentists, and a number of supporting staff members under the supervision of Dr. Kamal Al-Mubasher from the Faculty of Dentistry. The initiative also reflected the University's commitment to strengthening students' practical training while promoting the values of social responsibility and volunteerism. Cases requiring further treatment were documented to ensure appropriate follow-up through future field visits and the necessary medical referrals.

The Al-Birr and Al-Ihsan Campaign supported the implementation of the medical day by providing the mobile dental clinic and participating in the distribution of oral hygiene and personal care kits to the beneficiaries in cooperation with the University. In addition, the campaign's volunteer youth committees contributed to organizing the event, providing logistical support, and coordinating the movement of beneficiaries within the clinic to ensure the smooth delivery of services.

The event also featured recreational activities for the children, along with the distribution of gifts, adding a humanitarian and educational dimension to the initiative and bringing joy to the participating children, while reflecting the University's mission of community service and its commitment to creating a positive impact across different segments of society.

This medical day highlights the importance of collaboration between academic, national, and community institutions in implementing health and humanitarian initiatives, thereby maximizing their positive impact and extending essential healthcare services to those who need them most.
